Acupuncture is a form of traditional medicine that originated in ancient China. It has been reported to be effective in treating various ailments from depression to hot flashes in cancer. Acupuncture involves the application of needles into meridians to restore the balance of qi. However, due to issues with sterility, its use has been associated with the transmission of pathogens such as.

Acupressure, an alternative medicine technique similar in principle to acupuncture, is based on the concept of life energy (qi) which flows through meridians in the body. Treatment involves physical pressure applied to acupuncture points with the aim of clearing blockages in these meridians. Pressure may be applied by hand, elbow, or with various devices.

Evidence for the therapeutic effects of acupuncture mainly comes from clinical practice and research into pain control, fibromyalgia, headaches, Parkinson's disease, schizophrenia, and depression. Acupuncture can be administered using either manual insertion of needles or light stimulation to stimulate acupuncture points to promote healing and better health. It is a form of chromotherapy or color therapy, with no known anatomical or histological basis for the existence of.
